Professional Summary

Senior backend and platform engineer with 6+ years building reliability-critical cloud infrastructure and database services at large fleet scale. Strong background in distributed systems, backup and recovery, high availability, workflow orchestration, and AI-assisted operational tooling. Combines deep infrastructure ownership with design leadership across service-runtime and control-plane systems, plus practical AI adoption that improves engineering execution.

Experience

Senior Member of Technical Staff

Oracle

Mar 2023 - Present

Hyderabad, India

- Own recoverability and high-availability workflows for Oracle Base Database Service on Oracle Cloud Infrastructure (OCI) across service-runtime and control-plane systems supporting **70K+ managed database systems**.
- Serve as the primary escalation point for Base Database Service (BaseDB) backup and recovery issues, operating fleet-wide workflows on an hourly cadence with **strong production stability**.
- **Lead design** across service-runtime and control-plane layers for standby backup and restore, cross-incarnation recovery, long-term restore, restore preview, and multi-standby workflows.
- Partner with QA, SRE, database, and infrastructure teams to investigate failures, harden rollouts, and land durable fixes; delivered improvements across **1,200+ engineering tickets** over Oracle tenure.
- Built an AI operations agent for safe multi-step execution across OCI APIs, Linux VMs, and Oracle Database workflows, delivering **order-of-magnitude productivity gains** for the team.
- **Lead team AI adoption and strategy** through Model Context Protocol (MCP)- and Large Language Model (LLM)-based tooling, including mentoring development of a retrieval-based assistant for similar-issue discovery and solution guidance.

Member of Technical Staff

Oracle

Sep 2020 - Mar 2023

Hyderabad, India

- Built and hardened backend workflows for **backup and recovery automation** across pluggable database operations and service reliability.
- Delivered **10+ customer-facing features** across standby lifecycle, restore automation, recovery-service integrations, object-storage backup flows, and vault-backed credential and key-management paths.

Data Analytics Intern

American Express

Jul 2019 - Dec 2019

Gurugram, India

- Built Python, PySpark, and web-based analytics tooling to process transaction datasets with **millions of records** and surface anomalous patterns for review.
- Developed a **document transformation pipeline** and dashboard interface for structured model documentation workflows, enabling users to run jobs, track processing history, and review generated summaries.

Technical Skills

- **Languages:** Java, Python, SQL, TypeScript, JavaScript, C, C++
- **Core Engineering:** Distributed Systems, System Design, Backend Engineering, Platform Engineering, Control Plane Systems, Workflow Orchestration, API Design, REST APIs, Microservices, Event-Driven Architecture, Message Queues, Caching, Reliability Engineering, Linux
- **Cloud:** OCI, Oracle Database, Database Services, Object Storage, OCI Vault, AWS, GCP, Azure, Cloudflare, Docker, Terraform, CI/CD, GitHub Actions, Observability, Monitoring
- **AI:** LLMs, Generative AI, AI Agents, Codex, Agentic Workflows, Prompt Engineering, RAG, Embeddings, Semantic Retrieval, Vector Search, Model Context Protocol (MCP), OpenAI, LiveKit, Voice AI, STT, TTS

Education

Birla Institute of Technology and Science, Pilani, Goa Campus

B.E. (Hons.), Computer Science, 2016 - 2020
